

## Mühlhäuser enters Tunnel Boring Machine Business

**Zürich / Lyon, 13.11.2015: NFM Technologies and MÜHLHÄUSER have signed an exclusive agreement whereby Mühlhäuser will represent NFM Tunnel Boring Machines (TBMs) with core European customers as well as selected premium partners around the globe.**

Following several successful collaborations in developing logistical solutions to specific project requirements, such as Lyon – Turin, where MÜHLHÄUSER designed and delivered a belt conveyor system for an 11,2 m NFM Single Shield TBM, the two tunnelling specialists agreed to step forward with a long term cooperation agreement, with a view to better serve customers with a complete tunnelling solution.

“Based on MÜHLHÄUSER's decades of experience with the design and realization of TBM-Backup systems and the profound track record of key members of the new MÜHLHÄUSER management team in both TBM supply as well as selection, job site equipment installation and the operation of tunnel boring machines, we feel very well prepared to serve the tunnelling industry with a full solution, from the TBM to the logistical challenges under ground” commented **Markus Rechner, CEO** of MÜHLHÄUSER.

“In the recent past, many long standing customers have expressed their strong interest in new options and alternatives for the supply and service of Tunnel Boring Machines. We are therefore convinced that based on a proven partnering approach between contractors, MÜHLHÄUSER and NFM many successful projects will be realized”, added **Rainer Oestreicher, CFO** of MÜHLHÄUSER.

### **About NFM Technologies**

Ranked amongst the most important tunnel boring machine manufacturers in the world, **NFM Technologies** provides TBMs of 4 to more than 15 metres in diameter, suited to all types of geology, acknowledged for their reliability and robustness.

### **About Muehlhaeuser**

With a history of more than a hundred years **MÜHLHÄUSER** is one of the world's most recognized brands for machinery solutions under ground, with a leading position in rail- bound and trackless transportation, belt conveyor systems as well as equipment for concrete, grout and related applications.
